

MISSION NEXT
— TECHNICAL ACADEMY —

BRAND KIT V1.0 - AUGUST 2026

Mission Next Technical Academy

A production-ready identity system for advertising, marketing, web design, presentations, and institutional communications.

Protected master logo + usable assets + design tokens + templates + governance

One recognizable system. Many applications.

The brand kit converts the existing Mission Next Brand Book into a practical system people can actually use. The goal is consistency without forcing every execution into the same layout.

Build technical skills that unlock doors.
Sharpen professional skills that open them.

Brand essence

Purposeful progress through practical technical education.

Forward movement, applied capability, disciplined education, and a clear sense of direction.

Current brand expression

Learn it.
Practice it.
Prove it.

Current leadership direction. Brand Book v3.0 contains an earlier wording and should be synchronized in a future controlled revision.

Credible

Accurate, disciplined, supportable claims.

Practical

Show the work and the learning experience.

Accelerated

Focused and respectful of the learner's time.

Purposeful

Progress with a clear reason behind it.

Human

Real adults, real constraints, real support.

Modern

Digitally fluent without tech cliches.

Protect the source. Build around it.

The approved full-color logo remains the master identity. It is preserved in this kit byte-for-byte and should never be overwritten, redrawn, stretched, rotated, cropped, or recolored.

MISSION NEXT
— TECHNICAL ACADEMY —

Full logo

Default choice for websites, brochures, flyers, email headers, presentations, certificates, and institutional materials.

Minimum digital width: 220 px

Minimum print width: 1.75 in

Secondary M mark

Use when the Mission Next brand is already established or the space is constrained: favicon, social avatar, watermark, section motif, app icon.

Minimum digital size: 32 px

Minimum print size: 0.25 in

Clear space: maintain at least one orange-band-height of clear space around the full logo or M mark.

More is preferred in premium layouts.

Master file SHA256 verified in kit

Logo system

Approved derived variants

Primary full-color: white and very light neutral backgrounds.

Reverse white: Mission Blue / dark backgrounds and dark photography with quiet image area.

Mission Blue monochrome: simplified reproduction and constrained printing.

M mark: avatar, favicon, watermark, or compact established-brand use.

Do

- Use approved kit files.
- Keep generous breathing room.
- Choose the variant with the strongest contrast.
- Keep partner/certification logos visually separate.

Derived variants never replace the protected master

Do not

- Stretch, rotate, skew, outline, or add shadows.
- Change the gradient or create new logo colors.
- Use the wordmark alone as a new primary logo.
- Build certification or partner marks into the lockup.

Logo applications

Institutional authority with controlled energy.

Mission Blue

#1F4E79

Primary institutional

Mission Blue Dark

#123754

Deep backgrounds / authority

Signal Orange

#F26A2E

Action / emphasis

Steel Gray

#3A3F45

Body / technical neutral

Light Slate

#E6EDF3

Panels / separation

Electric Blue

#2F80ED

Help Desk accent

Cyber Teal

#00A6A6

SOC + AI/ML accent

Usage hierarchy

Mission Blue: dominant institutional color.

Signal Orange: action, emphasis, progression. Use sparingly so it keeps impact.

Program accents: navigation and recognition signals, not replacement brands.

Accessibility

Mission Blue, Mission Blue Dark, Steel Gray, Ink, and White offer strong text contrast in the approved combinations.

Signal Orange, Electric Blue, and Cyber Teal are best used for accents, large display text, borders, icons, and non-text elements on white.

Color	Contrast vs white	Guidance
Mission Blue	8.66:1	Good for small text
Mission Blue Dark	12.35:1	Good for small text
Signal Orange	3.05:1	Accent / large text; avoid small body text
Steel Gray	10.62:1	Good for small text
Light Slate	1.18:1	Accent / large text; avoid small body text
Electric Blue	3.87:1	Accent / large text; avoid small body text
Cyber Teal	3.00:1	Accent / large text; avoid small body text

No Pantone values assigned in the current system

Color

Clear hierarchy before decoration.

Practical technical education.

Roboto Bold - H1 / major campaign statements - 48-68 px responsive

Learn it. Practice it. Prove it.

Roboto Bold - H2 / section headlines - 32-48 px responsive

Mission Next combines structured instruction, applied learning, and professional readiness in a focused environment designed for adults and emerging professionals.

Open Sans Regular - body copy - 16 px / 1.65 line height

`ipconfig /all | SIEM | pandas.DataFrame()`

JetBrains Mono - commands, code, technical labels - use selectively

Type rules

- Left alignment is the default.
- Use bold to delineate scan points.
- Avoid tiny text to solve layout problems.
- Favor short paragraphs and strong section labels.

Roboto / Open Sans / JetBrains Mono

Fallbacks

If brand fonts are unavailable, use Arial for headings/body and Consolas for technical callouts. Do not substitute decorative fonts.

Typography

Make the brand recognizable without repeating the logo.

Progression motif

Use stacked directional bands derived from the geometry already present in the M mark. They can frame a corner, direct the eye, divide sections, or create subtle movement.

Signal line

The orange line is a recurring action cue for CTAs, section starts, key statistics, and progression. It should be a signal, not wallpaper.

Important: graphic motifs are supporting assets, not alternate logos. Do not assemble them into a new M mark or use them as a substitute for the protected logo.

Structure + motion + restraint

Graphic language

One academy. Three programs. Controlled accents.

Mission Next: IT Help Desk & Career Accelerator

Accent: Electric Blue

Use for rules, icons, labels, cards, or small visual cues. Mission Blue remains the master brand color.

Mission Next: Security Operation Center (SOC) Analyst

Accent: Cyber Teal

Pair with Mission Blue for an operational, security-focused feel. Avoid hacker stereotypes.

Mission Next: Foundations of AI & Machine Learning

Accent: Cyber Teal

Differentiate through data/code imagery and selective Signal Orange, not a new invented color system.

Brand architecture rules

- Mission Next Technical Academy is always the master brand.
- Use official institutional program names on first reference.
- Program accents support recognition; they do not become standalone program logos.
- KnovaQuest appears only where legal, ownership, contractual, or regulatory context requires it.
- Boots2Bytes remains a separate iZen program and is not part of the Mission Next identity system.

Show real work. Keep the human story visible.

Preferred

- Adults actively working through technical tasks.
- Remote instruction and instructor interaction.
- Realistic workstations and screens.
- Labs, troubleshooting, data, terminal, dashboards, code, and interfaces when relevant.
- Diverse adult learners across age and career stage.

Avoid

- Hooded hackers, Matrix code, glowing locks.
- Robots, sci-fi brains, or magical AI imagery.
- Military uniforms or tactical decoration in general brand materials.
- Handshakes and generic boardroom stock photography.
- Busy images behind the logo or critical text.

Selection test: Does the image help someone understand the learning experience or the type of technical work being practiced? If not, it is probably decoration.

Help Desk

Identity/access, Windows, M365, networking, ticketing, remote support, peripherals.

SOC

SIEM, packet capture, logs, alert triage, incident workflows, monitoring dashboards.

AI/ML

Python, notebooks, dataframes, charts, feature engineering, model workflow visualizations.

Technology is the subject; progress is the human story

Imagery

Structured, spacious, immediately scannable.

8-point spacing rhythm

4 8 12 16 24 32 48 64 96

Use spacing to create hierarchy before adding rules, boxes, or effects.

Component treatment

Cards: 16-24 px radius, light borders, restrained shadow.

CTAs: Signal Orange primary; Mission Blue outline secondary.

Bullets: prefer a consistent side rule + bold lead-in for marketing collateral.

1 focal point

One dominant message per section.

Strong grid

Clear columns and deliberate alignment.

White space

Intentional breathing room, not unused design.

Density standard: fill the space with useful, supported information or branded structure. Do not shrink type or invent claims simply to make a page look full.

Specific beats superlative

Layout

Reusable composition systems, not finished campaigns.

Included sizes

- 1080 x 1080 social square
- 1080 x 1350 social portrait
- 1584 x 396 LinkedIn banner
- 1200 x 400 email header
- 1920 x 1080 web hero
- 1920 x 1080 presentation cover
- 1200 x 628 program cards

Built-in controls

- Protected logo placement
- Signal Orange action cue
- Directional motif
- Brand expression placement
- Compliance footer on advertising-sized templates
- SVG source + PNG export

Edit content; preserve the visual system

Templates

Design tokens make consistency executable.

Token files

mission-next-tokens.css

mission-next-tokens.json

mission-next-theme.js

Use these as the source for React, landing pages, web apps, email design, and future component libraries.

Core web behaviors

- Mission Blue primary navigation and headings.
- Signal Orange primary CTA.
- Program accents for orientation only.
- Cards use light borders and restrained shadows.
- Typography stays large enough to read comfortably.
- Accessibility takes priority over accent-color purity.

```
:root {  
  --mn-mission-blue: #1F4E79;  
  --mn-signal-orange: #F26A2E;  
  --mn-font-heading: "Roboto", Arial, sans-serif;  
  --mn-font-body: "Open Sans", Arial, sans-serif;  
  --mn-radius-md: 16px;  
  --mn-shadow-card: 0 18px 50px rgba(18,55,84,.12);  
}
```

CSS + JSON + JS included

Web system

Direct. Practical. Credible. Human. Confident.

Lead with

- What students learn.
- What they practice.
- How they demonstrate capability.
- Program format, hours, structure, and expectations.
- Technical capability + professional readiness.

Avoid

- Guaranteed employment or salary language.
- Guaranteed certification or exam outcomes.
- Instant-career or effortless-transition claims.
- Generic superlatives and hype.
- Military language as decoration.

Core message hierarchy

Institutional hero: Build technical skills that unlock doors. Sharpen professional skills that open them.

Learning philosophy: Learn it. Practice it. Prove it.

Brand promise: Structured technical education that builds practical capability, confidence, and career awareness in a format designed for real life.

Message standard: Specific beats superlative.

Credibility is part of the brand.

Required licensure phrase in advertising:

Licensed by the Florida Commission for Independent Education, License No. 13639.

Education vs. employment:

Training and education, not employment, are being offered.

Program naming

- Mission Next: IT Help Desk & Career Accelerator
- Mission Next: Security Operation Center (SOC) Analyst
- Mission Next: Foundations of AI & Machine Learning

Use official institutional names on first reference.

Certification support

Keep third-party certification support subordinate to the educational program. State that certification is independent, optional, and not guaranteed.

Do not create visual lockups that make CompTIA or another certification body appear to endorse Mission Next.

Source hierarchy

Catalog: formal program facts, credentials, tuition, policies, admissions, disclosures.

Brand Book + this kit: identity, visual expression, voice, messaging standards.

Marketing plan: campaigns, offers, audience tactics, current go-to-market decisions.

Make the right thing easy to use.

File naming

MNTA_[Asset]_[Variant]_[Size]_v#

Example: MNTA_Social_Square_1080_v1.svg

Version control

Never overwrite the protected master. Create new controlled versions of derived assets when the system changes.

Approval triggers

- Primary logo or logo geometry changes
- New brand color or typeface
- New tagline/brand expression
- New program sub-brand system
- New co-branding convention

Everyday flexibility

- Layout can vary.
- Photography can vary within the imagery rules.
- Program accents can shift emphasis.
- Campaign creative can be fresh while keeping the same brand DNA.

North star: every Mission Next touchpoint should feel like it came from the same institution even when the layout changes.

**Credible. Practical.
Accelerated. Purposeful.**

Human and modern by design.

What mature brand systems get right.

Asset access

Strong systems make approved logos, variants, and practical examples easy to find rather than burying them in a policy document.

Clear rules

Minimum size, exclusion space, background treatment, and misuse rules remove ambiguity without slowing people down.

Recognizable repetition

A limited palette and a small number of repeatable visual cues create recognition faster than a large library of decorative elements.

Benchmarking reference points used during development: Slack's centralized Brand Center / media kit model, Spotify's separation of full logo vs. icon plus exclusion-zone and minimum-size rules, and Mailchimp's controlled logo variants, generous clear-space guidance, and tightly managed palette. Mission Next applies the principles while retaining its own approved identity.

What this means for Mission Next

The kit intentionally favors a protected master logo, a secondary M mark, a small approved palette, one directional motif, reusable templates, and executable design tokens. The system should become easier to recognize as it is used more often.
